

gense

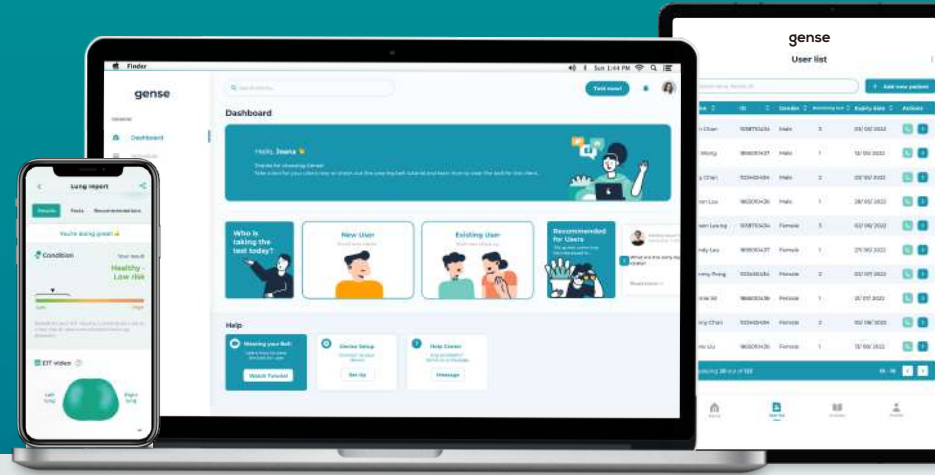

Low-Cost Portable
Medical Imaging

About us

Our portable medical imaging device targets preventive screening and chronic disease monitoring at home, elderly homes, clinics and more

We believe in decentralised healthcare via affordable and accessible technologies

Decentralise Healthcare with gense

Home-based health monitoring

Benchmarked with clinical standards

Real-time screening results in app

Screening Vital Organs

Gense offers an affordable and portable self-help medical imaging device for in-depth health monitoring and preventive screening at home and in clinics. The device targets some of the costliest diseases' early detection and chronic disease management for liver, lungs, kidney, and more.

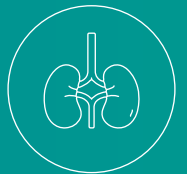

Lung

Liver

Kidney

Awards

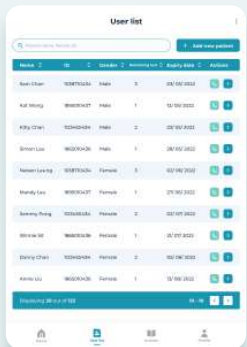

Our Product

gense APP

Health monitoring from the comfort of your home and personalized preventive care tips

mediscan

Monitor organ-specific health indexes across lungs, liver and kidney with gense device and app

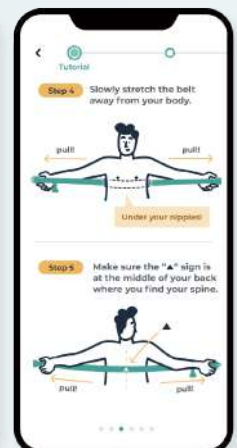

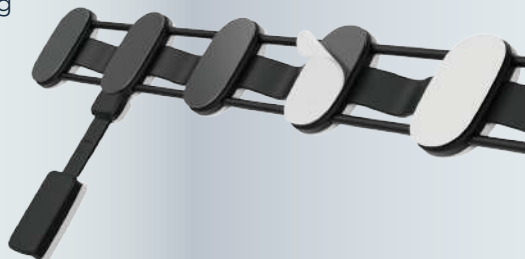

gense APP for service provider

Enroll and manage new clients for home-scanning services, decentralised screening and monitoring at elderly homes, clinics and more

mediscan belt

Self-monitoring for anyone without medical training

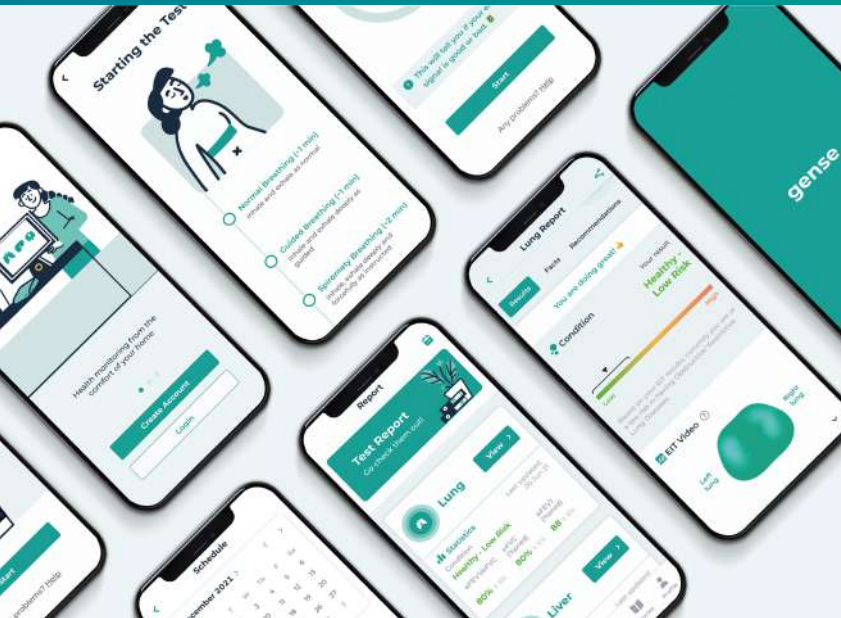

Gense has developed capacity to mass manufacture with medical device certification. Our devices are deployed in public hospitals and used by the Hong Kong public sector to remotely monitor recovered COVID patients.
